(#) Sampling Techniques:

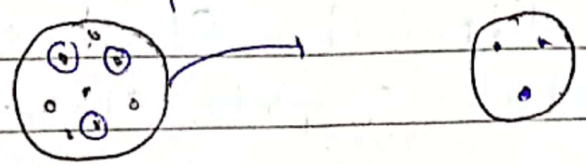
Sampling techniques are the methods that is used to select sample or subset from the population.

(#) Types:-

- Random
- Stratified
- Systematic
- Clustered

⊙ Random:

In this we are select the sample, grp of people randomly.



⊙ Stratified:

we are select the data based on some "characteristic" called and this division called "strata".

→ then we select the sample from the strata.

ie: Gender etc.
