PART-12

PAGE NO.:
DATE:

(#) probability :

measure of likelihood of a particular event occuring

→ 0 and 1 → certainty
↓
Impossibility

→ 0.5 & 0.6 → varying degree of likelihood

(#) sample space :

set of all possible outcomes of Random experiment

i.e: Tossing a coin

$S = \{T, H\}$

(#) Event :

event is a subset of sample space

i.e: (i) getting an even number $\{2, 4, 6\}$
(ii) getting prime Number $\{2, 3, 5 \ldots\}$

Scanned with OKEN Scanner

(#) probability fn :

it assign to probability to each event

PAGE NO.:
DATE:

ie: $P(\text{getting head}) = \frac{1}{2} \Rightarrow \frac{\text{fav. outcomes}}{\text{Total outcomes}}$

(#) Complument of an event :

it consists of all outcomes that is not in A.

ie: $A = \{2, 4, 6\}$

$A' = \{3, 5, 1\}$

ie: $A = 0.5$

$A' = 1 - P(A)$

ie: $P(A) + P(A') = 1$

$$\boxed{P(A)' = 1 - P(A)}$$
