Part-6

PAGE NO.:
DATE:

Measures of Central Tendency :-

- Mean
- Median
- Mode

- **Mean :**

It is used for Numerical variables
it is easily affected by outlier or extreme values

- **Median :-**

Median is the middle value of the dataset when it is ordered.

→ Numerical variables
→ and it is less influenced by outliers.

→ In case of even number median is an average of the two middle values

DATE:

(#) Mode :-

Mode is the most frequent used value in the dataset.

→ Generally it is used for categorical variables.

→ In case of Numerical variable Unique count should be less.

ie

$X = \{2, 4, 3, 4, 2, 6, 7, 2\}$

⇒ 2 mode

(#) Summary :-

i) Distribution of dataset (depends)
ii) Numerical values w/o outliers (Mean)
iii) Numerical variable with outliers (median)
iv) Categorical variable (Mode)
