DAY-24

PAGE NO.:
DATE:

(ii) Student's T distribution :

it is used when sample size (n) ≤ 30.

⊙ C.I = PE ± ME

$M.E = z_c * \frac{\sigma}{\sqrt{n}}$ → (Unknown)

↓ now we use

s (sample std)

⊕ s: Sample std :

$M.E = t_{\alpha/2} * \frac{s}{\sqrt{n}}$ (n: sample size)

⊕ Degree of Freedom :

DOF represent as (n-1) ; n: sample size

⊙ as DOF (↑) → t-distribution very close to z- distribution
