DAY-28

PAGE NO.:
DATE:

(#) T-Test :-

- sample size small ($n<30$)
- compare mean of two grpr or mean of a sample to a unknown value
- when σ & μ is unknown

(I) Independent T-Test

(II) paired test

(I)

$$\boxed{T\text{-test} = \frac{\bar{X}_1 - \bar{X}_2}{\sqrt{\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}}}}$$

(II) paired T-test :-

comparing mean of two relative groupr. such as before & after measurement on the same subject

- formula :- $\boxed{\frac{\bar{X}_{diff}}{\frac{S_{diff}}{\sqrt{n}}}}$ n: number of pair / sample
