DAY-20

PAGE NO.:
DATE:

(#) Standardization :

Standardization is a process of converting "Normal distribution" into "Standard Normal distribution".

ND $\xrightarrow{std}$ SND

mean = 0
std = 1

(•) $$\boxed{z = \frac{X - \mu}{\sigma}}$$

z : zscore
X : particular value of N.D
μ : mean
σ : std.

(#) Normalization :

Rescale a dataset so that each value falls b/w 0 & 1.

(•) $$\boxed{X_{new} = \frac{X - X_{min}}{X_{max} - X_{min}}}$$

PAGE NO.:
DATE:

(ii) Normalization	Standardization
⊙ used min & max value for scaling	⊙ used mean & variance
⊙ scale value b/w 0 and 1	⊙ it is not bounded to a certain range.
⊙ it is affected by outliers	⊙ it is less affected by outliers
⊙ it is useful when we don't know about the distribution	⊙ it is useful when the feature distribution is normal or gaussian.
