PART-15.

PAGE NO.:
DATE:

(#) Bayes Theorem:

Update the probability of an event based on new evidence information.

(*)

$$P(A|B) = \frac{P(A) \cdot P(B/A)}{P(B)}$$

where

$P(A|B)$ = update probability
$P(A)$ = initial belief
$P(B)$ = marginal probability.
$P(B/A)$ = evidence that support the initial belief

(#) Usecases:

i) medical diagnosis
ii) spam classification
iii) Recommendation system
iv) Fraud detection
